THE AUTHENTIC ITALIAN HELMET BRAND  
SINCE 1974

THE AUTHENTIC ITALIAN HELMET BRAND  
SINCE 1974

# 50

## ANNIVERSARY

A milestone year has arrived for CABERG, 2024. The year in which we celebrate our **Golden Anniversary**.

**50 years** of true passion for the world of two wheels. **50 years** of heritage and tradition. **50 years** in which our top priority has always been safety. **50 years** of commitment to innovation. **50 years** of effort, perseverance and versatility. **50 years** in which the quality of our products manufacturing standards has been the distinguishing elements of our brand. **50 years** of eyes set on the present and the future.

At CABERG, we are proud of the line of work developed from the beginning back in 1974. A line based on effort and striving for quality and extreme care for safety. This has always been reflected in the production of reliable and innovative products. Thanks to the knowledge gained by five decades of experience not only on the Italian market but also with long lasting collaborations in more than 60 countries worldwide, we have been manufacturing avant-garde and versatile products to meet the fast changing needs of two-wheels enthusiasts.

CABERG is a family company that never forgets its roots and the long road travelled to the point in which we find ourselves now. We are excited to celebrate our 50th anniversary and to continue working with employees, clients and partners to see what the next 50 years bring

SIMONE SALTARELLI  
FIM EWC WORLD CUP CHAMPION

## TECHNOLOGY SAFETY LAB

Thanks to a modern certified laboratory Caberg can make internally not only all routine test required by the regulation ece 22.06, but also additional test to verify new materials and technical solution in order to improve helmets safety. The laboratory is also equipped with instruments to ensure and check components reliability with stress testing and periodical test for durability.

The four basics types test required by International Standards are the shock absorbtion, rigidity, deformation of the retention system, and the rotation stability.

The “shock absorbtion test” determines the capacity of an helmet to absorb and dissipate the energy of a blow.

During the test the deceleration of a helmet gauged headform falling free onto an anvil at given speed is measured.

The “rigidity test” measures the maximal and residual deformation of a helmet submitted to lateral or longitudinal compression.

The “retention system test” measures the maximal and residual elongation of the chinstrap of a helmet submitted to dynamic stress at a given energy. The stability measures the roll-off angle of a helmet submitted to a dynamic rotational face.
